DETAILED ACTION

Election/ Restriction

Claims 1-52 are pending in this application.

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. **Claims 1-31**, drawn to a semiconductor memory device, classified in class 257, subclass 295.
 - II. **Claims 32-52**, drawn to a method of making a semiconductor memory device, classified in class 438, subclass 3.
2. If Invention I is selected, Applicant is further required to elect one of the following patently distinct species:
 - Species IA.** Illustrated in Figures 1A and 1B or 15A and 15B
 - Species IB.** Illustrated in Figure 8 or Figure 22, and
 - Species IC.** Illustrated in Figures 10-13 or Figures 23-25.
3. If Invention II is selected, Applicant is further required to elect one of the following patently distinct species:
 - Species IIA.** Illustrated in Figures 1C and 2A-2L
 - Species IIB.** Illustrated in Figures 3 and 4
 - Species IIC.** Illustrated in Figures 5-7
 - Species IID.** Illustrated in Figures 15C and 16A-16F

Species III. Illustrated in Figures 17-18, and

Species IIF. Illustrated in Figures 19-21.

4. The inventions are distinct, each from the other because of the following reasons: Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case unpatentability of Invention I would not necessarily imply unpatentability of Invention II, since the device of Invention I could be made by processes materially different from those of Invention II. For example, the second ferromagnetic film of Invention I could be selectively deposited on the tunnel barrier film rather than by forming a second ferromagnetic layer on the tunnel barrier film then patterning the second ferromagnetic layer to expose a part of the tunnel barrier film as claimed in Invention II.

5. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claim 1 is generic to the claims in Invention I and claim 32 is generic to the claims in Invention II.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is

allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their different classification and their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

7. Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
